Acetal Ball Bearings

HES offers a wide range of bearings made with acetal rings and cages, and either glass or 316 stainless steel balls...

Corrosion Resistance
Hygienic
Lightweight
Low noise
Lubrication not necessary
Non-magnetic
Unaffected by *Water*

They can be run dry, or water lubricated and they are excellent for applications requiring wash-down. It should be remembered that Acetal bearings are recommended for low load, low speed applications, and they do not have the same tolerances as precision bearings.

More information can be found on the HES web site
