SPYRAFLO[®] BEARINGS

Spyraflo[®] bearings are a range of low cost pre-housed bearing solutions for both end users and OEM customers. The Spyraflo[®] solution can be used on panels as thin as 1mm, allows for up to 5° misalignment at assembly, and removes the need to accurately machine steel housings to secure standard bearings.

Spyraflo[®] press-in type bearings offer a simple solution for fast assembly line processes, and come in a variety of bearing materials including acetal, sintered bronze, PTFE Impregnated bronze and Needle Roller bearings.

Spyraflo[®] bolt-on combined bearings and housings are useful for assembly processes and general purpose applications where a removable bearing solution is desired. Two types of flanged housing and a pillow block design are available. The bearing material range is as for the press-in type.

More information can be found by typing "Spyraflo" into the category search on our web site.
