## LESCO LAWN MOWERS CUT TO SPYRAFLO PILLOW BLOCK BEARINGS

Out in the field, on the golf course or in the garden, LESCO commercial mowers are the industry standard. Their Z-Two zero turn radius, riding, mid-mount mower is amongst the fastest, strongest and most maneuverable available in the market today.

The design team at LESCO needed a Pillow Block, Self-Aligning bearing that could stand up to the rigors of being mounted on the steel fabricated cutting deck/chassis of the mower while at the same time carry the load, including shock load, and facilitate easy raising and lowering of the cut.

Many bearings were evaluated by the design engineers at LESCO/Commercial Turf, these included low-cost pressed steel bronze pillow blocks, and assorted rolling element bearing housings. Spyraflo worked with the design engineers to produce a custom yellow zinc plated steel version of the standard Spyraflo PB-625-B Aluminum Pillow Block which completely met the stringent requirements of LESCO.

The results have been outstanding with trouble free mowers being a great marketing and user success. Spyraflo now supplies these bearings across a range of LESCO and Cub Cadet mowers with cut widths ranging from 48" up to 72".
